

# Semi-Annual Environmental Disclosure

## AMERICAN ELECTRIC POWER (AEP)

AEP's Average Fuel Mix is for the 12-month period ended 09/2001 compared to a Regional Average for the 12-month period ended 06/2001.

Fuel Source	AEP's Average Fuel Mix of Electricity Provided to Michigan Customers (3)	Regional Average Fuel Mix Used to Generate Electricity in Michigan, Illinois, Indiana, Ohio and Wisconsin (4)
Coal	86.3%	71.3%
Nuclear	12.2%	22.7%
Gas	0.6%	3.8%
Oil	0.1%	0.8%
Hydroelectric	0.6%	0.5%
Renewable Fuels	0.1%	0.9%
Solar	-- (5)	--
Wind	<0.1%	--
Biofuel	--	--
Biomass	<0.1%	0.1%
Solid Waste Incineration (1)	<0.1%	0.2%
Wood	0.1%	0.5%
Other Fuel Sources (2)	<0.1%	--

(1) Solid Waste Incineration includes Landfill Gas.

(2) The "other" fuel source included in AEP's fuel mix includes power produced from a pumped storage hydroelectric facility.

(3) The fuel mix data for the electricity supplied to you by AEP that appears in these tables includes regional average fuel mix data from Michigan, Illinois, Indiana, Ohio and Wisconsin as a proxy for the actual fuel mix of certain electricity purchased by AEP because the actual fuel mix characteristics of that purchased electricity could not be discerned.

Purchased electricity accounted for 15% of the electricity supplied by AEP during the relevant period.

(4) Michigan's Regional Average fuel mix data has been prepared and supplied by the Michigan Public Service Commission.

(5) " - " means not applicable or negligible.

**THE MICHIGAN CUSTOMER CHOICE AND ELECTRICITY RELIABILITY ACT,  
PUBLIC ACT 141 OF 2000, REQUIRES DISCLOSURE OF THE FOLLOWING  
ENVIRONMENTAL INFORMATION ON A SEMI-ANNUAL BASIS  
BEGINNING IN JANUARY 2002.**

## Semi-Annual Environmental Disclosure

### AMERICAN ELECTRIC POWER (AEP) AVERAGE EMISSIONS CHARACTERISTICS

AEP data provided below represents the 12-month period ending 09/2001. The Regional Average data provided by the MPSC represents calendar year 1999 data for Sulfur Dioxide, Carbon Dioxide and Oxides of Nitrogen, while the nuclear waste numbers are based on the most recent fuel cycle ending 1998.

Type of emission or type of waste generated	American Electric Power's Average (lbs/MWh) (2)	Regional Average of all generation in Michigan, Illinois, Indiana, Ohio, and Wisconsin (lbs/MWh)
Sulfur Dioxide	14.9	19.9
Carbon Dioxide	2026.3	2117.2
Oxides of Nitrogen	5.6	7.9
High-Level Nuclear Waste (1)	0.0071	0.0074

(1) The high-level nuclear waste numbers presented in the table do not represent actual emissions to the environment. They represent the amount of spent fuel generated (expressed in lbs/MWh) per unit of electricity generated.

(2) AEP's average emissions data for sulfur dioxide, carbon dioxide and nitrogen oxides represent average emissions from the fossil fuel portion of our generation mix. Note: with in-depth analysis, the environmental characteristics of any form of electric generation will reveal benefits as well as costs. For further information, contact AEP at [www.aep.com](http://www.aep.com), by phone at 1-800-311-6424 or call Mike Brown, Indiana/Michigan Environmental Affairs Manager at 1-317-822-6373.
